

WHAT IS CLAIMED IS:

Sub
ay

1. A removable mounting bracket for attaching a component to a mounting surface comprising:

5 a bracket body having a mounting projection extending outwardly therefrom for cooperation with a fastener for fastening said bracket body to the mounting surface; and

10 a plurality of retaining members extending outwardly from said bracket body for cooperation with the component, at least one of said retaining members including a releasable attachment means for engaging a corresponding mounting means on the component.

15

20 2. The mounting bracket according to claim 1 wherein said releasable attachment means is an aperture formed in at least one of said retaining members, and said mounting means is at least one mounting tab formed on the component, said mounting tab releasably engaging a corresponding said aperture.

25 3. The mounting bracket according to claim 2 wherein said retaining members extend from said bracket body perpendicular to said mounting projection.

30 4. The mounting bracket according to claim 2 wherein each of said retaining members has an aperture formed therein.

5. The mounting bracket according to claim 1 including a plurality of ribs and grooves formed on said bracket body, said ribs and grooves cooperating with a corresponding plurality of ribs and grooves on the component.

6. The mounting bracket according to claim 1 wherein said mounting projection receives a mounting insert for

62 cooperation with the fastener.

7. A removable mounting bracket for attaching an ignition coil assembly to a mounting surface, comprising:

5 a bracket body having a mounting projection extending outwardly therefrom for cooperation with a fastener for fastening said bracket body to the mounting surface; and

10 a releasable attachment means formed on said bracket body for engaging a corresponding mounting means formed on the component.

8. The mounting bracket according to claim 7 wherein said releasable attachment means is a plurality of elongated
15 retaining members extending outwardly from said bracket body, at least one of said retaining members having an aperture formed therein, and said mounting means is a plurality of mounting tabs formed on the component, each of
20 said mounting tabs releasably engaging a corresponding aperture.

9. The mounting bracket according to claim 8 wherein said retaining members extend from said bracket body perpendicular to said mounting projection.

25 10. The mounting bracket according to claim 8 wherein each of said retaining members has an aperture formed therein.

30 11. The mounting bracket according to claim 8 including a plurality of ribs and grooves formed on said bracket body, said ribs and grooves cooperating with a corresponding plurality of ribs and grooves on the component.

35 12. The mounting bracket according to claim 8 wherein said mounting projection receives a mounting insert for cooperation with the fastener.

ay 13. The mounting bracket according to claim 8 wherein the component is one of a pencil-type ignition coil assembly and a coil-on-plug-type ignition coil assembly.

5

14. An assembly for attaching a component to a mounting surface on a vehicle, said assembly comprising:

a component having a plurality of mounting tabs formed thereon;

10 a bracket body having a mounting projection extending outwardly therefrom for attaching said bracket body to the mounting surface; and

15 a plurality of elongated retaining members extending outwardly from said bracket body, at least one of said retaining members having an aperture formed therein, each of said mounting tabs releasably engaging a corresponding one of said apertures.

15 15. The mounting bracket according to claim 14 wherein said retaining members extend from said bracket body perpendicular to said mounting projection.

20 16. The mounting bracket according to claim 14 wherein each of said retaining members has an aperture formed 25 therein.

17. The mounting bracket according to claim 14 including a plurality of ribs and grooves formed on said bracket body, said ribs and grooves cooperating with a 30 corresponding plurality of ribs and grooves on said component.

18. The assembly according to claim 14 wherein said component is one of a pencil-type ignition coil assembly and 35 a coil-on-plug-type ignition coil assembly.

19. The assembly according to claim 14 including a fastener for attaching said mounting bracket and said

Q17 component to the mounting surface.

20. The assembly according to claim 19 wherein the mounting surface is one of a valve cover, a cam cover, and a 5 cylinder head.
